#### 11. FINANCIAL RISK MANAGEMENT

The Group adopts stringent risk management policies and monitoring system in particular on the exposure associated with the financial risks as set out below:

#### · Capital risk management

The Group manages its capital to ensure that entities in the Group will be able to continue as a going concern while maximising the return to shareholders through the optimisation of the debt and equity balance. The capital structure of the Group consists of debt, when applicable, and equity attributable to owners of the Company, comprising issued share capital, reserves and retained earnings as disclosed in the condensed consolidated statement of changes in equity. The management reviews the capital structure by considering the cost of capital and the risks associated with each class of capital. In view of this, the Group will balance its overall capital structure through the payment of dividends, new share issues as well as the issue of new debt or the redemption of existing debt. The Group's overall strategy remains unchanged throughout the period.

#### Market risk

Interest rate risk

The Group is exposed to cash flow interest rate risk in relation to accounts receivable and bank balances. The Group currently does not have an interest rate hedging policy. However, the Group closely manages its exposure arising from margin financing undertaken by allowing an appropriate margin on the interest received and paid by the Group.

#### Equity price risk

The Group is exposed to equity price risk through its investments in listed equity securities. The directors of the Company manage the exposure by closely monitoring the portfolio of these financial instruments. The fair value of these financial instruments will be affected either positively or negatively, amongst others, by the changes in the closing market prices of the relevant listed equity securities.

#### 11. FINANCIAL RISK MANAGEMENT (Continued)

#### **Currency risk**

In the opinion of the directors of the Company, the currency risk exposure is not significant as most of the transactions and financial assets and liabilities of the group entities are denominated in the functional currency of the respective entities and, in the case of United States dollars ("US\$"), the exposure is limited as US\$ are pegged to HK\$.

#### Credit risk

The Group's maximum exposure to credit risk which will cause a financial loss to the Group due to failures to discharge an obligation by the counterparts is arising from the carrying amount of the respective recognised financial assets as stated in the condensed consolidated statement of financial position.

The Group takes on exposure to credit risk, which is the risk that a counterparty will be unable to pay amounts in full when due. Impairment allowances are made for losses that expected to be incurred at the end of the reporting period. Significant changes in the economy, or in the health of a particular industry segment, could result in losses that are different from those provided for at the end of the reporting period. Management therefore carefully manages its exposure to credit risk.

The Group structures the levels of credit risk it undertakes in relation of accounts receivable, and other receivables, by placing limits on the amount of risk accepted in relation to any borrower, or groups of borrowers, and to geographical and industry segments. Such risks are monitored on a revolving basis and subject to a quarterly or more frequent review.

The credit risk on bank balances is limited as the counterparties are banks with high credit rating assigned by international credit-rating agencies.

#### Liquidity risk

As part of ordinary broking activities, the Group is exposed to liquidity risk arising from timing difference between settlement with clearing houses or brokers and clients. To address the risk, treasury team works closely with the settlement division on monitoring the liquidity gap.
